

### **ABSTRACT OF THE DISCLOSURE**

Disclosed is a method for changing a performance controlling parameter of a mobile telecommunication terminal, in which the parameter is changed by using an SMS message of the mobile telecommunication terminal. The method preferably includes receiving a short message including a performance controlling parameter to be changed and applying the performance controlling parameter to the mobile telecommunication terminal. When the parameters which control a performance of the mobile telecommunication terminal by a change of the mobile telecommunication system are changed or when the performance controlling parameter of the mobile telecommunication terminal is to be changed by a need of the mobile telecommunication provider/manufacturer, on-line A/S is possible and a cost generated by off-line A/S can be reduced.
